

****Three Postdoc positions at WIAS-Interacting random systems group****

The Weierstrass Institute in Berlin is looking to fill up to three postdoc positions.

Here is a brief description of the call:

"The successful candidates will analyze large interacting random systems using probabilistic methods within the newly established DFG priority program SPP 2265 "Random Geometric Systems" (<https://www.wias-berlin.de/projects/SPP2265/>). The main research topics of these positions are phase transitions during coagulation and condensation. The third position is financed from other funds and offers more thematic flexibility within the research group and organizational responsibility.

Please direct scientific queries to Prof. Dr. W. König (Koenig@wias-berlin.de).

Deadline for applications: 30.09.2020"
