** Two PhD positions at TU Delft **

=Within NWO Vici grant
"Foundations of Stochastic Partial Differential Equations" (FoundSPDE)

two PhD positions are available under the supervision of Prof. Veraar https://fa.ewi.tudelft.nl/~veraar/

Short description:
At the Delft Institute for Applied Mathematics (DIAM), part of Delft University of Technology (TU Delft), NL, two full-time PhD positions in the mathematical analysis of stochastic partial differential equations are offered. The PhD candidate will be supervised by Prof.dr.ir. M.C. Veraar (part of the Analysis Group at DIAM). The focus of both of the projects is on well-posedness, regularity, long-time behavior, large deviations and/or approximation of solutions to parabolic and hyperbolic SPDEs of semi- and quasi-linear type. A background in Probability Theory and/or Analysis is preferable.

The deadline for application is June 24th. For further details see
