

It is a pleasure to announce the call for a Postdoctoral position in Mathematical Analysis at the Department of Mathematics of the University of Genoa. The main research themes will be inverse problems, PDE, applied harmonic analysis and machine learning. Candidates who are familiar with one or more of these topics are encouraged to apply.

The start of the position is planned in September 2019, and the duration of the contract is 1+1 years.

At this stage, *perspective candidates are only asked to get in touch with me by sending their CV by the 5th May. The official call will open in May*, and I will contact you personally with some instructions on the application procedure (which is not that simple even with a PhD in Maths!).
