

Postdoc in Complex Analysis in Iceland

There is a three-year postdoctoral position available at the

University of Iceland financed by The Icelandic Centre for Research,

<http://www.rannis.is>.

The research project is called: "Complex Analysis with Emphasis on Pluripotential Theory"

We are mainly interested in the theory of holomorphic and

plurisubharmonic functions and we are especially interested

in applications of the L^2 method for constructing holomorphic

functions.

We are looking for a candidate who has completed a PhD within the

last 5 years or is close to defending a PhD thesis. Her/his specialization

and interests should be in this area.

Everyone is welcome to contact us for further

information.

Applications should be sent to us directly by e-mail, including a CV, list of publication or an abstract of a planned PhD thesis, and a research statement. The names and e-mail addresses of two referees should be included, a thesis advisor should be one of them.

The application deadline is December 31. All applications will be answered. The starting time for the position is a matter of agreement.
