Subject: Postdoc Position, Ocean Biogeochemical  
Modeling, MBL and MIT

From: Joe Vallino <[jvallino@mbl.edu](mailto:jvallino@mbl.edu)>

Date: May 11, 2016

A postdoctoral position in Ocean Biogeochemical  
Modeling is available  
at the Marine Biological Lab, Woods Hole. This NSF-  
funded,  
collaborative project with the Massachusetts Institute of  
Technology  
will focus on developing a thermodynamics- and trait-  
based  
biogeochemistry framework to augment the existing  
marine ecosystem  
modeling framework ("Darwin model") developed at MIT.  
We are seeking  
an individual with a PhD in a scientific field and  
experience in  
marine biogeochemical modeling. While not required,  
knowledge in  
Fortran, thermodynamics, numerical analysis and/or  
optimal control

theory will be considered advantageous. The successful candidate will be expected to work collaboratively with teams at both MBL and MIT, but will be employed at MBL. Review of applications will begin 1 June 2016 and continue until the position is filled. Funding support is available for three years, but performance will be reviewed on an annual basis.

Applications should be submitted through <https://mbl.simplehire.com/postings/3389>
