

School on Homogenization

Lectures given by

G. ALLAIRE, A. BRAIDES, G. BUTTAZZO,
A. DEFRANCESCHI, L. GIBIANSKY

Lecture notes of the courses held at
ICTP, Trieste, September 6–17, 1993

SISSA Ref. 140/93/M (September 1993)

Contents

Grégoire ALLAIRE

Two-Scale Convergence and Homogenization of Periodic Structures 1

1. Asymptotic analysis of periodic structures 2
2. Two-scale convergence 5
3. Homogenization of a second order elliptic equation 10
4. Application to fluid flow in porous media 13
5. Estimate of the pressure in a porous medium 19

Grégoire ALLAIRE

An Introduction to Homogenization and Bounds on Effective Properties Applied to Optimal Shape Design 25

1. Optimal shape design: a model problem 26
2. G -convergence and relaxation 30
3. The Hashin-Shtrikman variational principle 34
4. Another model problem in elasticity 38

Andrea BRAIDES

An Introduction to Homogenization and Γ -convergence 43

1. Γ -convergence for integral functionals 44
2. A general compactness result 51
3. Homogenization formulas 57
4. Examples: homogenization without standard growth conditions 67
5. Examples: other homogenization formulas 71

Giuseppe BUTTAZZO

Γ -convergence and its Applications to Some Problems in the Calculus of Variations 81

1. Γ -convergence: the general framework. 82
2. Limits of sequences of Riemannian metrics. 84
3. Γ -convergence for a class of singular perturbation problems. 88
4. A limit problem in phase transitions theory. 93
5. Γ -convergence in optimal control theory. 96

Anneliese DEFRANCESCHI

An Introduction to Homogenization and G -convergence 107

- I. Homogenization of second order linear elliptic operators. 110

II. Homogenization of monotone operators.	131
III. G-convergence; H-convergence.	141
A. Appendix.	155

Leonid V. GIBIANSKY

Bounds on the Effective Moduli of Composite Materials	169
--	-----

1. Composite materials and their effective properties	170
2. Bounds on the effective properties of composite materials	179
3. The translation method to bound effective moduli of composites	186
4. Implementation of the translation method to the plane elasticity problem	197

Acknowledgements. The lecturers wish to thank the organizers of the School on Homogenization Gianni Dal Maso and Gianfausto Dell'Antonio.
