

**\*\* Postdoctoral/career development positions in Oxford \*\***

The Department of Statistics at Oxford has just advertised three postdoctoral fellowship positions: two Bicentennial Florence Nightingale Fellows (closing date: noon on 15th November), with a preference for people working in Probability or Statistical Methodology, and a Glasstone Research Fellowship (closing date: noon on 12th November) in any area of Probability or Statistics.

These are all 3-year fixed term jobs. The Florence Nightingale Fellowships are career development positions, intended to carry around half the teaching load of an ordinary Oxford faculty position. They can start on or before 1st October 2022. The Glasstone Research Fellowship has research as its primary goal (although the post-holder will be encouraged to gain some experience of teaching), and would normally start on 1st October 2022.

More details can be found on the department's [vacancies page](#), where there are links to detailed job descriptions and the online application form. (Candidates should please note that their referees should send their letters of reference by the closing date.)

I would be very grateful if you could bring this to the attention of any suitable people that you know! If

potential applicants have any questions about any of the posts, please ask them to contact Christina Goldschmidt <[goldschm@stats.ox.ac.uk](mailto:goldschm@stats.ox.ac.uk)> or Robin Evans <[evans@stats.ox.ac.uk](mailto:evans@stats.ox.ac.uk)>, and we will be happy to answer them as fully as possible.
