Problema 3: visualizzazione e calcolo di orbite per la Standard Map.

La Standard Map

Un esempio di sistema dinamico discreto nel piano è la cosiddetta Mappa Standard definita sul toro $T^2 \equiv [0, 1] \times [0, 1]$ dalla funzione

$$\begin{cases} x_{n+1} = x_n + y_n + \frac{\epsilon}{2\pi} \sin(2\pi x_n) \pmod{1} \\ y_{n+1} = y_n + \frac{\epsilon}{2\pi} \sin(2\pi x_n) \pmod{1} \end{cases}$$

L'evoluzione di un punto iniziale (x_0, y_0) è data dalle successive applicazioni di tale funzione e l'insieme dei punti così ottenuti è detto **orbita** di (x_0, y_0) .

Per $\epsilon = 0$ nei punti dell' orbita non cambia il valore iniziale di y_0 mentre l' ascissa aumenta ad ogni passo della stessa quantità.

Per $\epsilon > 0$ nei punti dell' orbita cambiano sia l' ascissa che l' ordinata ad ogni passo.

Facciamo degli esempi numerici

$$SM : \begin{cases} X_{n+1} = X_n + Y_n + \frac{\epsilon}{2\pi} \sin(2\pi X_n) \pmod{1} \\ Y_{n+1} = Y_n + \frac{\epsilon}{2\pi} \sin(2\pi X_n) \pmod{1} \end{cases}$$

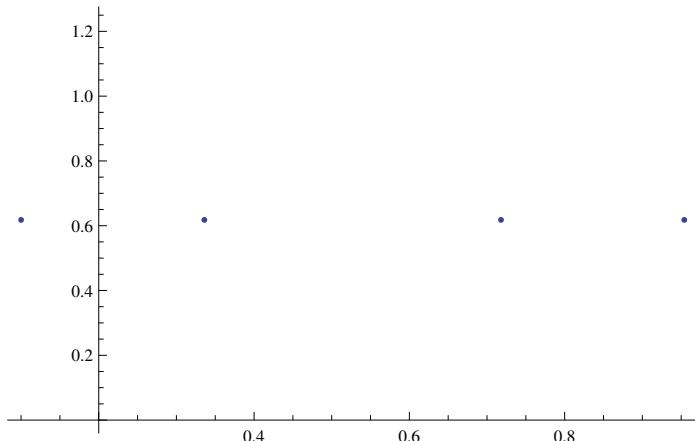

```
f[eps_][{x_, y_}] :=
{Mod[x + y + eps / (2 Pi) * Sin[2 Pi * x], 1], Mod[y + eps / (2 Pi) * Sin[2 Pi * x], 1]}

orbita[x0_, y0_, eps_, nmax_] := Block[{k, lista = {}, punto = {x0, y0}},
